

Attachment for Order Picker

Order Picker Attachments - Order preparation operation or order picking as it is more commonly known is a process used within warehouse operations and comprises workers called order pickers. The order picker's job is to take and collect articles like [forklift parts](#) in particular quantities to be able to accomplish the client's orders previous to shipment. Order picking is an easy warehousing method. The efficiency in which this particular job is accomplished can be directly linked to a supply chain's productivity. Hence, order picking is among the most controlled logistic methods. Order picking falls in the category of the warehouse management system.

There are some certain types of order picking. The main types comprise: pick to box method, wave picking method, picker to part method or piece picking, sorting systems method and zone picking method.

The pick to box method comprises the order picker filling the box with the stuff from his or her station. The box then moves to other picking stations until the client order is complete. In this particular technique, there is no movement of the order picker employees. In the wave picking method, the order pickers move about to be able to collect the necessary things for numerous orders. The piece picking or picker to part method is similar where the order pickers or picker move to gather the items required but for one order only.

There is no movement by the order picker in the sorting systems method. Rather, things are delivered to the order picker by an automatic system like for example an automatic storage system or a conveyor system. In the zone picking method, each and every order picker is assigned to one particular area. They are responsible for just realizing order picking in this particular zone.
