

Parts for Cushion Tire Forklifts

Cushion Tire Forklift Parts - Cushion tires have a smooth profile on a firm tire with its tread being cemented to a steel ring in order to shape the tire. The [forklift parts](#) tire is pressed on the hub that is then mounted onto the lift truck. These kinds of tires are suited for use in smooth floor warehouses and are accessible in different polyurethane or rubber compounds.

Consisting of polyurethane, a poly tire is a very solid tire. These kinds of tires are used as a substitute for cushion tires whenever there is a higher load capacity than can be obtained using a cushion tire and those applications that need a lower steering effort. Poly tires accessible in a variety of hardness ratings so as to meet different specific application requirements. Orderpicker lift trucks and Narrow Aisle models would normally make use of small diameter poly tires for their outrigger load wheels.
